EVOLUTION**

maximum hygiene

The RIO models meet the strictest hygiene regulations. The direct cooling system prevents any water from being stored, guaranteeing maximum hygiene and reducing the cleaning requirements.

greater safety

All RIO models are fitted with MICROLENE Water Purifiers to remove all sediments, the taste and smell of chlorine and any organic contaminants and of course cysts.

greater efficiency

Choose "your" drinking water from a surprisingly extensive range: for constant access to cold, ambient water, or hot water (at max 95° C for making coffee or other hot beverages).

lower costs

In all settings, the RIO appliances allow for a drastic cut in the costs linked to drinking water, owing to their direct connection to the water mains. Moreover, cleaning and maintenance operations are less frequent and more affordable, thanks to the direct cooling system. Easy sanitising procedures guaranteed for all models.
